

I have many files with this format: and put them in folder records

auto-1430377593-105-955413105.wav

1430377593 (Unix Timestamp) it must convert to normal date and time

(<http://www.epochconverter.com/>) that mean: Thursday, April 30, 2015 10:06:33 AM

105 (Caller)

955413105 (Called)

Now I need PHP list that show them like: and when click download can download the file and if click on play, will play the file (files format will be .wav or .mp3)

Also I need to search by: Date and time, by Caller, by Called

Note: every day new files will be added to the folder

Note: maybe we have more than 10000 files, so it is better add paging that for default show 50 item but ability to change it, 50, 100, 200, and 500 and also ability to export to excel for all data not sowing section.

Note: please put player to ability to play the file.

Note: This system will have login also, that mean user and pass so need a section to create login access.

Note: in page, also show total files that we have.

DATE and Time From Unix Timestamp	Caller	Called	Play	Download
Thursday, April 30, 2015 10:06:33 AM	105	955413105	Play	Download
